

CALL FOR PAPERS

ICCMCEA 2020
Feb 10-11, 2020
Barcelona, Spain

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICCMCEA 2020 : International Conference on Composite Materials for Civil Engineering Applications is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Composite Materials for Civil Engineering Applications. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Composites in civil engineering	Fully composite structures
Composite materials in building and construction applications	Composites in the industry
Composite technology development	Composites in ground engineering
Design and performance attributes of composites	Glass fiber rods for prestressing
Composite materials in civil infrastructure	Aramid rods for prestressing
Mechanics and manufacturing science of composite materials	Carbon fiber bonded plates
Composites for structural applications	Composite bars as reinforcement
Traditional composites	Aramid rope systems
Polymer matrix composites	Carbon fiber cables for stays and prestressing tendons
