

CALL FOR PAPERS

ICSMCS 2020
Mar 05-06, 2020
Rome, Italy

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICSMCS 2020 : International Conference on Simulation and Modeling of Control Systems is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Simulation and Modeling of Control Systems. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

- | | |
|--|---|
| Control system simulation | State and parameter identification of nonlinear systems |
| Controls, modeling and simulation | Structured model of real-time systems |
| Building models for a specified purpose using system identification | Simulation investigations of dynamical systems |
| Optimization of computer structures | Computer simulation oriented models of concurrently flowing processes |
| Knowledge engineering approach to system modelling, diagnosis, supervision and control | Simulation and controller design for engineering applications |
| Process control of large scale systems | Digital simulation of closed-looped control system |
| Advanced digital control in wire industry | A simulation study of unstable limit cycles |
| Simulation and realization of in-line control algorithms | Inverse simulation for nonlinear system analysis |
| Simulation in control system design | Statistical properties of the quantization noise |
| Simulation and computer aided control system design | Optimal control of large scale systems |
| Modelling and simulation of nonlinear systems | Computer aided decentralized control system design |
| Realization algorithm for time-varying systems | |
