

CALL FOR PAPERS

ICDSE 2020
Mar 23-24, 2020
Tokyo, Japan

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICDSE 2020 : International Conference on Data Storage Engineering is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Data Storage Engineering. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

- Accessibility
- Addressability
- Capacity
- Computer data storage
- Database storage structures
- Storage and file structures
- Database storage management
- Hierarchy of storage
- Primary storage
- Secondary storage
- Tertiary storage
- Off-line storage
- Characteristics of storage

- Data organization and representation
- Database control and storage structures
- Data representation in computer systems
- Data representation methods in the computer system
- Database storage structures management
- Storage structures and access methods
- Data Integration, Interoperability, and Metadata
- Ubiquitous Data Management and Mobile Databases
- Query processing, query optimization, and data structures
- Storage media
- Related technologies
- Network connectivity
- Tertiary storage
