

# CALL FOR PAPERS

**ICSEPP 2020**  
**Jun 17-18, 2020**  
**Montreal, Canada**

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICSEPP 2020 : International Conference on Sustainable Energy Planning and Policy is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Sustainable Energy Planning and Policy. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

- |  |  |
|--|--|
| Sustainable energy planning                        | Comparative assessment of energy strategies                            |
| Energy planning for sustainable development        | Simulation of energy markets   |
| Urban, energy and environmental planning           | Modeling externalities of energy                                       |
| Energy system analysis and design                  | Evaluation of environmental externalities                              |
| Low carbon development                             | Internalizing external effects in energy planning                      |
| Modeling and decision support systems              | Electrical power generating system                                     |
| Sustainable energy economics and modeling          | The pricing of environmental externalities                             |
| Economic-environment-energy modeling               | Sustainable energy risk management                                     |
| Various modeling approaches                        | Price volatility and risk management                                   |
| Theory of energy economics                         | Energy derivatives   |
| Energy demand/supply adequacy                      | Value-at-risk  |
| Sustainable energy demand modeling and forecasting | Portfolio risk analysis and application to electricity supply planning |
| Electrical power generation planning               | Electricity demand forecasting   |
