

CALL FOR PAPERS

ICFSMSAA 2020
Jun 11-12, 2020
Tokyo, Japan

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICFSMSAA 2020 : International Conference on Finite Strip Method, Structural Analysis and Applications is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Finite Strip Method, Structural Analysis and Applications. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Finite strip method
Technique of structural analysis
Bridge and tall structure design
Design of construction components
Analysis of plates
Further developments in finite strip analysis
Applications of finite strip method
Performance of the finite strip method
Finite strip buckling and postbuckling analysis
Dynamic analysis of bridge
Conventional finite strip method

Geometric stiffness matrices
Stability solution
Constrained finite strip method
Comparison of some variants of the finite strip method
Civil engineering and finite strip method
Civil engineering practice and finite strip method
Civil engineering works and finite strip method
Civil engineering planning and finite strip method
Civil engineering contracts and finite strip method
Civil engineering construction and finite strip method
