

CALL FOR PAPERS

ICCTSA 2020
Jun 18-19, 2020
Toronto, Canada

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICCTSA 2020 : International Conference on Connected Transportation Systems and Applications is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Connected Transportation Systems and Applications. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Connected transportation

Cyber-technology for connected and automated transportation systems

Intra-vehicle communication (e.g., vehicle-to-pedestrians, vehicle-to-portable, vehicle-to-sign)

Network and system architectures for connected transportation systems

MAC protocols and channel management in connected transportation systems

Physical layer and routing protocols for connected transportation systems

Delay tolerant techniques and protocols for connected transportation systems

Real-time optimization systems for connected transportation systems

Modeling and theoretical proofs of communications in connected transportation systems

Emerging Internet of Things (IoT) applications with connected transportation systems

Smart sensors and communications in connected transportation systems

Quality-of-service and quality-of-experience for connected transportation systems

Information and content centric networking in connected transportation systems

Data retrieval via software-defined connected transportation systems

Performance evaluations of connected transportation systems
