

CALL FOR PAPERS

ICECS 2020
Jul 13-14, 2020
Ottawa, Canada

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICECS 2020 : International Conference on Engineering Cybernetics and Systems is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Engineering Cybernetics and Systems. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Engineering cybernetics	Oscillating control
Applications of engineering cybernetics	servomechanisms
Engineering cybernetics, current and common topics	Sampling servomechanisms
Engineering cybernetics and systems engineering	Linear systems with time lag
Automatic control of dynamic systems	Linear systems with stationary random inputs
Control theory and systems theory	Nonlinear systems
Feedback control and associated stability analysis	Linear system with variable coefficients
Linear and nonlinear systems	Control design by perturbation theory
Laplace transformations	Control design with specified criteria
Input, output, and transfer functions	Optimalizing control
Feedback servomechanisms	Filtering of noise
Noninteracting controls	Ultrastability and multistability
Alternating-current servomechanisms	Control of error
	Technical cybernetics
