

CALL FOR PAPERS

ICGPGFM 2020
Aug 20-21, 2020
London, United Kingdom

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICGPGFM 2020 : International Conference on Genetic Pollution, Gene Flow and Migration is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Genetic Pollution, Gene Flow and Migration. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Evolutionary biology	Allele frequencies
Evolution	Proportion of members carrying a particular variant of a gene
Evolutionary processes	Barriers to gene flow
Gene flow	Gene flow in humans
Gene migration	Gene flow between species
Genetic pollution	Horizontal gene transfer
Naturally-evolved	Genes as phylogenetic markers
Region-specific species	Genetic erosion
Uncontrolled hybridization, introgression and genetic swamping	Genetic admixture
Replacement of local genotypes	Genetic drift
Population genetics	Allelic drift
Transfer of alleles or genes from one population to another	Natural selection
Gene pool	Selection and genetic variation
