

CALL FOR PAPERS

ICCMCS 2020
Sep 21-22, 2020
Toronto, Canada

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICCMCS 2020 : International Conference on Computational Methods for Control Systems is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Computational Methods for Control Systems. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Computational control	Design of fault detection and isolation filters
Computational intelligence in control	Periodic systems
Computational methods in systems and control theory	Neural network control
Computational methods for control of engineering systems	Fuzzy control
Model and controller reduction	Reinforcement learning in feedback control systems
Manipulation of polynomial and rational matrices	Brain machine interfaces
Descriptor systems analysis and synthesis	Computational complexity in systems and control
