

CALL FOR PAPERS

ICDCS 2020
Dec 24-25, 2020
Vienna, Austria

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICDCS 2020 : International Conference on Dynamical Control Systems is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Dynamical Control Systems. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Dynamical and control systems
Dynamic systems and control
Nonlinear dynamical control systems
Optimal hold functions for digital control systems
Actuator placement using degree of controllability for discrete-time systems
Techniques in reconfigurable control system design

Techniques in deadbeat and one-step-ahead control
Discrete-time LQR techniques in the control of modern canals
Analysis and control of nonlinear singularly perturbed systems under sampling
Techniques in control systems
Implicit model techniques and their applications
