

CALL FOR PAPERS

ICDSCME 2022
Apr 22-23, 2022
Tokyo, Japan

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICDSCME 2022 : International Conference on Digital Signal Controllers in Mechatronic Engineering is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Digital Signal Controllers in Mechatronic Engineering. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Digital signal processing for mechatronic applications
Principles and algorithms
Digital signal controllers in mechatronics
Algorithms for digital signal processing
Digital signal processing methods suitable for mechanical systems
Sensors and digital signal conditioning in mechatronic systems
Discrete-time signals and sampling

Continuous-time signals
Digital filter design
Digital control design
Random signals and spectral estimation
Random signal processing
Spectral representation
Linear filters
