

CALL FOR PAPERS

ICRFDM 2022
May 20-21, 2022
Berlin, Germany

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICRFDM 2022 : International Conference on Reservoir Formation Damage Mechanisms is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Reservoir Formation Damage Mechanisms. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Reservoir formation damage
Common formation damage problems, factors and mechanisms
Understanding and mitigation of formation damage
Formation damage mechanisms
Formation damage indicators
Formation damage measure- skin factor
Consequence of formation damage
Potential sources of formation damage
Prevention and treatment of formation damage
Oil and gas reservoirs for formation damage potential
Drilling-induced near-wellbore formation damage

Reservoir stress-induced formation damage
Inorganic scaling and geochemical formation damage
Formation damage by organic deposition
Laboratory assessment of the formation damage
Laboratory evaluation of formation damage
Field diagnosis and mitigation of formation damage
Formation damage control and remediation
Conventional techniques and remedial treatments for common problems
Modeling and simulation of formation damage
Interactions and coupling of reservoir fluid, completion, and formation damages
Formation damage simulator development
