

CALL FOR PAPERS

ICECR 2022
May 24-25, 2022
Montreal, Canada

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICECR 2022 : International Conference on Electroanalytical Chemistry and Research is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Electroanalytical Chemistry and Research. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Electroanalytical chemistry	Cell EMF dependency on changes in concentration
Electroanalytical methods and methodologies	Balancing redox reactions
Electroanalytical sensing systems	Quantitative electrolysis and faraday's laws
Electroanalytical measurements	Electrochemical sensing
Potentiometric measurements	New potential electrode materials
Voltammetric measurements	Electrolysis of molten sodium chloride
Electrochemical sensors for clinical analysis	New strategies for electrochemical
Electrochemical cells and reactions	Sensors and biosensors
Electrochemical potentials	Electrochemical cells
Junction potentials	Standard electrode potential
Oxidation and reduction	Spontaneity of redox reaction
