

CALL FOR PAPERS

ICRSEA 2022
Oct 21-22, 2022
London, United Kingdom

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICRSEA 2022 : International Conference on Rock Slope Engineering and Applications is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Rock Slope Engineering and Applications. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Rock slope engineering
Rock slopes in civil and mining engineering
Probabilistic rock slope engineering
Engineering geological model in rock slope engineering
Geotechnical challenges in rock slope engineering of infrastructures
Slope stability hazard assessment and mitigation
Rock slope design
Structural geology and data interpretation

Site investigation and geological data collection
Rock strength properties and their measurement
Stabilization of rock slopes
Geological factors controlling stability of rock slopes
Shear strength of highly jointed rock mass and discontinuities
Analytical, graphical and computer analysis of planar, wedge and toppling failures
Recent developments in slope stability analysis
Advanced numerical techniques in rock slope stability analysis
