

# CALL FOR PAPERS

**ICDMCS 2022**  
**Nov 01-02, 2022**  
**San Francisco, USA**

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICDMCS 2022 : International Conference on Data Mining for Cyber Security is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Data Mining for Cyber Security. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Data mining for cyber security  
Data mining for intrusion detection and prevention  
Data mining for fraud detection and prevention  
Monitoring network security  
One-class based anomaly detection  
Data stream mining for security  
Deep learning for cyber security  
Big data architectures for network security

Identify theft detection and prevention  
Evaluating data mining approaches to security  
Adversarial machine learning  
Detecting data and information leakage using data mining techniques  
Detecting malicious code using data mining techniques  
Detecting compromised IoT devices  
Detecting malicious documents  
Detecting security threats in social networks
