

CALL FOR PAPERS

ICCFSM 2020
Jul 13-14, 2020
Ottawa, Canada

The International Research Conference is a federated organization dedicated to bringing together a significant number of diverse scholarly events for presentation within the conference program. Events will run over a span of time during the conference depending on the number and length of the presentations.

ICCFSM 2020 : International Conference on Constrained Finite Strip Method is the premier interdisciplinary forum for the presentation of new advances and research results in the fields of Constrained Finite Strip Method. The conference will bring together leading academic scientists, researchers and scholars in the domain of interest from around the world. Topics of interest for submission include, but are not limited to:

Finite strip method
Technique of structural analysis
Bridge and tall structure design
Design of construction components
Analysis of plates
Further developments in finite strip analysis
Applications of finite strip method
Performance of the finite strip method
Finite strip buckling and postbuckling analysis
Dynamic analysis of bridge
Conventional finite strip method

Geometric stiffness matrices
Stability solution
Constrained finite strip method
Comparison of some variants of the finite strip method
Civil engineering and finite strip method
Civil engineering practice and finite strip method
Civil engineering works and finite strip method
Civil engineering planning and finite strip method
Civil engineering contracts and finite strip method
Civil engineering construction and finite strip method
